ACKNOWLEDGMENT

The PCRP Operations Manual and Sub-Manuals are the product of a collaborative effort by the KALAHI-CIDSS National Program Management Office (NPMO) Manual Writers, under the leadership of Ms. Didith T. Bosoen and the following sub-manual lead writers: Mr. Jezon P. Romano, Engr. Monien D. Penaflor, Mr. Aljay A. Martinez, Mr. Jose Zacarias L. Noel De Castro, Engr. Bessie F. Magtangob, Mr. Jedrick G. Sanchez, Ms. Jenelyn D. Africa, Ms. April Loise L. del Rosario, Mr. Mark Joshua Nathaniel A. Ramos, Ms. Carmilyn R. Atienza, and Mr. Soliver Arenas—in close coordination with all the different divisions of the NPMO, namely: the Social Development Division, headed by Mr. Jezon P. Romano; the Finance Division, led by Mr. Simeon C. Lagenio; the Community Procurement and Infrastructure Division, led by Engr. Marvin T. Trillana; the Program Proficiency Development, Communication, and Advocacy Division, led by Ms. Anne Hazel F. Flores and Ms. Maan Julia D. Gonzales; and the Personnel Administrative Services Division, led by Mr. Juan Miguel Martin N. Tirona.

Valuable technical support was provided by the World Bank through Ms. Malu N. Padua, Ms. Josephine Ramos Jade, and Ms. Maria Benilda E. Redaja. This sub-manual would not have been possible without the strong management support and strategic guidance of Director Bernadette A. Mapue-Joaquin, Director Rolando D. Villacorta Jr., and Dr. Samuel Clark, as well as the Operations Group Executive Committee, led by Undersecretary Monina Josefina H. Romualdez and Assistant Secretary Edmon B. Monteverde.

The NPMO likewise extends its sincere appreciation to the National and Regional Program Management Office (RPMO) technical staff and our partner National Government Agencies, including the Department of the Interior and Local Government (DILG), Department of Environment and Natural Resources (DENR), Department of Agriculture (DA), National Commission on Indigenous Peoples (NCIP), and Department of Public Works and Highways (DPWH), for their meaningful inputs, comments, and recommendations, which significantly contributed to the refinement and enhancement of this sub-manual.

Official Use Only

PREFACE

This Sub-Manual provides detailed activities/sub-activities, expected outputs, and other operational standards or protocols for the **Community Resilience Implementation Process (CRIP)** of the **Philippine Community Resilience Project** (PCRP). The CRIP described herein is anchored on the **Project Operations Manual (POM)** and drawn from the extensive implementation experiences of the National Community-Driven Development Project (NCDDP).

It is mandatory for all PCRP staff at all levels to read and thoroughly understand the POM and Sub-Manual 1 since these provide the core features of the field operations. There are other Sub-Manuals, which provide more detailed procedures and tools for specialized areas of operations. Key features of the other Sub-Manuals are referenced in relevant aspects of CRIP. The other Sub-Manuals should be read by staff as relevant to their roles:

1. Sub-Manual 2: Community-Managed Sub-Project
2. Sub-Manual 3: Program-Level Financial Management
3. Sub-Manual 4: Community Financial Management
4. Sub-Manual 5: Program-Level Procurement
5. Sub-Manual 6: Community-Managed Procurement
6. Sub-Manual 7: Monitoring and Evaluation
7. Sub-Manual 8: Environmental and Social Management Framework
8. Sub-Manual 9: Capacity Building
9. Sub-Manual 10: Contingent Emergency Response

The POM and all Sub-Manuals (SMs) shall be reviewed periodically in the course of Project implementation and, whenever significant implementation concerns arise, shall be revised or adjusted as deemed strategic. Any changes in the POM and SMs shall be subject to review and issuance of no-objection letter from the World Bank.

PART 1. INTRODUCTION

1. The Philippine Community Resilience Project (PCRP): *Pagkilos* aims to strengthen community capacities for participatory resilience planning and increase access to resilience investments in vulnerable areas. Explicitly, the central focus of PCRP are the participating municipalities and barangays which were identified to be disproportionately disadvantaged by economic, environmental, life-cycle, and social risks.

2. At the heart of this process is the Community-Driven Development (CDD) approach which provides opportunities for active participation of community members, builds their coping capacities and supports the creation of strong local organizations that serve as a platform for communities to have control over key decisions on development and use of resources.

3. The PCRP social mobilization is called Community Resilience Implementation Process (CRIP) that operationalizes the following principles:

GUIDING PRINCIPLES		OPERATIONAL STRATEGIES/KEY FEATURES
P	Participatory	Broadened participation of communities and ensured representation of marginalized groups throughout the CRIP by facilitating creation and capacity building of community committees and linking them to the formal governance structures.
A	Adaptation and mitigation for resilience	Enable communities to learn and take on adaptation and mitigation practices and technologies to attain resilience.
G	Good governance	Builds community capacities for social accountability and transparency
K	Knowledge building	Systematically gather and disseminate information to better understand the differentiated impact of various risks on vulnerable households and communities and available adaptation practices and technologies.

Official Use Only

I	Intergovernmental partnership	Promotes engagement between and among LGUs and communities for resilience for holistic response, resource sharing, and establishing mutually reinforcing actions.
L	Localized and flexible operating system	Build capacities of local action teams for community-based financial management; procurement; social accountability and monitoring as key to resilience.
O	Organizational development	Strengthen locally-based organizations as platforms for understanding shared risks and undertake well-managed and sustained collective action for social resilience.
S	Science-based decision making	Dynamic sharing of data/information as a basis for more rational and informed decision-making, priority-setting and budgeting.

PART 2: OVERVIEW OF THE COMMUNITY RESILIENCE IMPLEMENTATION PROCESS (CRIP)

4. The CRIP is initiated after the Local Government Unit (LGU) signed the Memorandum of Agreement (MOA) and Specific Implementation Arrangement (SIA) with the agreement to provide the required local counterpart commitment and other project requirements. The participation in PCRP is then formalized through a MOA between the MLGU and the Department of Social Welfare and Development (DSWD). On its part, the RPMO assigns and deploys a trained ACT to the municipalities.

5. The CRIP has the following major stages as illustrated by Figure 1:

a) Stage 1: Participatory Risk and Vulnerability Assessment and Resilience Planning;
b) Stage 2: Community Resilience Sub-Project Development;
c) Stage 3: Community-Managed Resilience Sub-Project Implementation
d) Stage 4: Community-based Monitoring and Review

Official Use Only

Figure 1. Community Resilience Implementation Process

PDO: "Strengthen Community Capacities for Participatory Resilience Planning & Increase Access to Resilience Investments in Vulnerable Areas"

6. The CRIP is not a cyclical process, it is a one-time, results-driven approach that follows a structured sequence from planning, implementation, and monitoring, focusing on achieving specific outputs within a defined timeframe rather than repeating cycles. However, the Municipal Resilience Plan (MRP) could be reviewed and updated annually based on the previous year's performance and/or on new risk/vulnerability assessment. The whole process is designed to be implemented over a 3-year period with the first batch of 345 municipalities starting in 2026 while the remaining 155 will start implementation in 2027. It is estimated that the first stage can be completed in 90 to 120 days with additional time allowance for municipalities with a large number of barangays. The implementation of the second stage will take about 90 to 120 days while the community-managed sub-project implementation (stage 3) will be undertaken based on the approved MRP and the community-based monitoring will run throughout stage 3 and 4.

Official Use Only

7. The Area Coordinating Team (ACT) is primarily responsible for facilitating the CRIP implementation, particularly with reference to the first stage. The ACT is led by the Area Coordinator, who is primarily responsible for LGU partnership development as well as act as team leader; and community facilitators (CFs), whose primary role is mobilization for community/barangay participation. Each CF will be assigned to, at most, 5 barangays. During the sub-project development and implementation, technical support will be provided by an Area Coordinating Team and various technical specialists of the Regional Project Management Office (RPMO) as well as by resource persons from other agencies or organizations as may be relevant to the proposed sub-project/s will also be mobilized to provide technical support as deemed necessary.

8. Parts 3 to 6 of this Sub-Manual provide the detailed steps; major outputs; tools/templates; participation requirements and other protocols or standards for each stage. In addition, a field guide will be developed by the National Project Management Office (NPMO) to provide a more instructive guide for ACTs, with inclusion of facilitation tips, questions and other practical mobilization techniques.

PART 3: PARTICIPATORY RISK AND VULNERABILITY ASSESSMENT AND RESILIENCE PLANNING

9. The first stage intends to build collective understanding on the major risks that affect the communities as a basis for preparing the MRP. The key performance indicators related to this stage are as follows:

a) 100 percent of communities trained on risk and vulnerability assessment and resilience planning;
b) At least 70 percent household participation in barangay assemblies for community resilience planning;
c) Community resilience plans developed in 85 percent of communities; and
d) 40 percent of municipalities with PLGU participation in the municipal or community resilience planning process.

Official Use Only

10. To achieve the aforementioned targets, the major steps in stage 1 are as follows:

a) Organizational Meeting of the Municipal Resilience Team (MResT);
b) Preliminary profiling of municipal and barangay, focused on risks and vulnerability situation;
c) Barangay Participatory Risk and Vulnerability Assessment; and
d) Municipal-wide Participatory Risk and Vulnerability Assessment and Resilience Planning.

3.1 MResT Organizational Meeting

11. The formal entry to the municipality starts with the PCRP orientation for MResT members. The RPMO through the AC sends a formal letter to the participating MLGU requesting a schedule for the orientation and organizational meeting of the MResT, with the Municipal Mayor as chairperson. The Mayor could designate a co-chairperson from among the MResT members, composed of the following staff and community representatives:

- Municipal Disaster Risk Reduction and Management Officer (MDRRMO)
- Municipal Planning and Development Coordinator (MPDC)
- Municipal Social Welfare and Development Officer (MSWDO)
- Municipal Agriculture Officer (MAO)
- Municipal Engineer (ME)
- Municipal Health Officer (MHO)
- Municipal Budget Officer (MBO)
- Municipal Accountant (MA)
- Municipal Local Government Operations Officer (MLGOO)
- Municipal Environment and Natural Resources Officer (MENRO)
- Municipal Economic Enterprise Development Officer (MEEDO)
- Head or Representative of the Public Employment Service Office (PESO)

Official Use Only

- At least 2 representatives of the Sangguniang Bayan (preferably, chair of committee on appropriations and committee on social welfare/protection)
- Indigenous Peoples Mandatory Representative (if applicable)
- All Barangay captains (please refer to paragraph 12 for qualifier regarding municipalities with large number of barangays)
- 2 NGO/CSO representatives

12. The MResT could decide to include other members, who may be deemed to play a critical role in PCRP, with due consideration to manageability and ensuring balanced representation between technical staff of LGU and communities. Related to this, some eligible municipalities have a large number of barangays which could constrain consensus building. Thus, for municipalities which have more than 30 barangays, the barangays may be clustered as duly agreed by the MResT. The clustering could cover contiguous barangays that represent a composite eco-system or group of barangays that experience inter-connected risks (i.e., upstream barangay causing floods in downstream barangays).

13. Barangay representation can then be by cluster, provided that they comprise not less than 50 percent of the MResT membership. This is to ensure that the communities have sufficient voice in decision-making. It is also incumbent upon the ACT to ensure that the cluster representatives fully understand the positions/situations of the various barangays; have the aptitude to consult all the concerned barangay officers/volunteers and take responsibility for providing adequate feedback to all barangays in the cluster.

14. The core agenda for the MResT organization meeting are as follows:

a) Discuss and introduce the program objective, key features, the CRIP with corresponding indicative outputs; timeline, requirements, and role of MResT as well as other major implementation arrangements;
b) Formalize and organize the Municipal Resilience Team (MResT);
c) Identify sources of data for risk and vulnerability assessment;

Official Use Only

d) Introduce the Area Coordinating Team (ACT) and Municipal Support Team (if applicable);
e) Organize Municipal Stakeholder and Feedback Mechanism Committee and other relevant committees;
f) Agree on schedule for barangay participatory risk and vulnerability assessment with barangay assembly as initial activity; and
g) For municipalities with more than 30 barangays, clustering of barangays and selection of cluster representatives.

15. The major expected outputs include the following:

a) MResT formally organized with agreed composition and roles and responsibilities, as documented in meeting report;
b) Arrangements for sharing of data/information/reports for risk and vulnerability assessment by concerned LGU staff/unit;
c) Provisional schedule of activities, primarily the date and time of second MResT meeting for Resilience Planning as well as date and time of barangay assemblies; and
d) For municipalities with more than 30 barangays, clustering of barangays and selection of cluster representatives.

3.2 Preliminary Profiling of Municipal and Barangay Risks and Vulnerabilities

16. The ACT proceeds with preparing a preliminary profile of the risks and vulnerabilities by barangays, using secondary data/information from the various LGU reports as identified during the MResT meeting. In addition, the ACT reviews relevant LGU documents/reports to draw initial insights on the identified risks/vulnerabilities as well as their corresponding causes, effects, and most affected areas or households/groups. The key documents for review include the Comprehensive Development Plan (CDP) and Annual Investment Plan (AIP) for the current year; the Local Climate Change Action Plan (LCCAP); the results/report on Community-Based Monitoring System (CBMS); Local Disaster Risk Reduction and Management Plan (LDRRMP); local Social Protection Plan and any other relevant sectoral plans. Lastly, the ACT also retrieves and familiarizes

Official Use Only

themselves with any existing map in the MLGU to determine if there are locational information on risks, hazards or other physical conditions that would be relevant inputs for the CRIP.

17. Using secondary data and information from review of relevant reports, the ACT prepares the preliminary risk/vulnerability profile per barangay in preparation for the first barangay assembly. (Please refer to Annex 1 for template.) The risk and vulnerability profiles need not be complete before entry to the barangay as this can be finalized as part of the next activities in Stage 1. Nevertheless, the preliminary profiling would provide the ACT an initial idea of the barangay situation and would enhance their facilitation.

3.3 Participatory Risk and Vulnerability Assessment (PRVA)

18. The PRVA will be conducted in all barangays regardless of the number of barangays. The PRVA will involve four major steps:

a) First barangay assembly to orient communities about PCRP and facilitate selection of community volunteers (CVs);
b) Barangay Risk and Vulnerability Mapping and Community Profiling and Validation;
c) Series of focused group discussions (FGDs); and
d) Barangay Risk and Vulnerability Assessment Workshop.

19. The **first barangay assembly** is intended to orient the community members about PCRP; present the preliminary barangay risk and vulnerability profile for initial discussions; and facilitate the selection of BResT for the PRVA activities, Stakeholder and Feedback Mechanism Sub-Committee (SFMSC) and determine FGD participants and schedules.

20. The orientation on PCRP will follow the same content as that for the MResT but would be laymanized or popularized by the CFs to ensure broad-based understanding. It will also emphasize the role of the barangay officials and members throughout the various stages of CRIP.

Official Use Only

21. The **selection of CVs** is one of the key decision points during the Assembly. The major tasks of the CVs will be to (i) participate in hands-on mapping of risks; (ii) support the mobilization of FGD participants; and, (iii) participate in the risk and vulnerability assessment workshop. The following criteria and other considerations for selection of CVs are suggested:

- Have broad knowledge of general conditions of the barangay;
- Able to represent the views of other community members;
- Have been a resident of the barangay for, at least, five years;
- Able and willing to spend at least 3 days for the tasks; and
- Volunteers for walk-through must have no medical condition or be physically fit.

22. To ensure inclusive or broad-based representation, the ACT should ensure that at least 30 percent of the CVs represent marginalized groups (e.g., women, IP, PWD, elderly, and youth); major economic groups such as farmers/fishers are represented and all puroks/sitios are also represented.

23. As part of the PRVA, LGUs and participating communities are encouraged to understand the nature of climate-related hazard risks and the livelihood assets that may be affected by unexpected events. Given the complexity of these issues and processes, the PCRP should provide technical assistance and support evidence-based planning by facilitating access to data and risk assessments. This will help identify infrastructure or livelihood investments and interventions that address actual climate vulnerabilities rather than perceived risks.

24. The Barangay Risk and Vulnerability Mapping involves a walk-through in the barangay by the BResT and CF to identify and map out the areas and households affected by environmental hazards, natural calamities and other risks. It will also capture observed effects of risks on agricultural land, forest, waterways, residential areas and critical or life-line facilities. The visualization through a map provides a broader or overview of the risks across the barangay and, potentially, in relation to adjacent or other barangays as well as its comparative impact on the different sections/households within the barangay. The validated information will serve as the official basis for identifying

Official Use Only

vulnerabilities, priorities, and appropriate interventions, and shall guide evidence-based planning, decision-making, and implementation of sub-projects. On its part, the BResT shall continue to gather and validate relevant data to ensure the accurate completion of the Community Profile.

25. The Series of Focused Group Discussions (FGDs). The FGD is intended to deepen the understanding of the differentiated views/experiences about the causes and effects of risks on various groups and/or across various aspects of community life. The FGDs will be held separately for each group, but not limited to the following:

a) **Economic groups:** since PCRP targets are rural municipalities, it is expected that this will likely refer to farmers and fishers. The ACT should ensure that farm tenants/laborers, plantation workers and other agricultural workers, who are residents of the communities, are represented;
b) **Indigenous peoples:** If the IPs are the minority in the barangay, a separate FGD should be held with them; and
c) **Women:** A separate FGD with women could be convened or they can be represented in all the aforementioned groups.

26. The Barangay Risk and Vulnerability Assessment Workshop pulls together the results of the community profile, the risk and vulnerability map and the results of the various FGDs. The participants would include the members of the Barangay Development Council (BDC) and the CVs. The objective of the workshop is to build a common understanding of the major risks that affect their barangay as well as the range of causes and effects of these risks, which will be documented and consolidated, using the prescribed table format in Annex 2.

3.4 Municipal-Wide PRVA and Resilience Planning

27. The final activity under stage 1 is the Municipal-Wide Risk and Vulnerability Assessment as a basis for preparing the MRP. The MRP preparation would be a series of meetings or workshops among the MResT members with resource

Official Use Only

persons from the Provincial LGU (PLGU) and other agencies as may be deemed relevant.

28. In preparation for the MRP sessions, the ACT consolidates the results of all the barangay PRVAs. The consolidated PRVAs serve as input to the MRP. In the case of municipalities with a large number of barangays (i.e., more than 30 barangays), the PRVAs can be consolidated by a cluster of barangays.

29. In addition, a representative from the PLGU could be requested to provide a short presentation of the highlights of the province-wide LCCAP or risk assessment (if available) that may have implications to the municipal resilience. The MLGU could also be requested to provide a short presentation on an existing hazard map and/or highlights of the LCCAP, if necessary. Other resource persons from the academe, other agencies or civil society organizations could also be invited to share innovative or new adaptation technologies/practices that could stimulate new ideas that sharpen the resilience planning.

30. The MRP starts with a consensus on the resilience objective that could be achieved in a 3-year period and aligned with the PCRP development objective. The MRP should also include the key indicators for measuring the achievement of the objective. The indicators could entail addressing the cause/s or effects of the risks or redound to improved coping capacity of the most at-risk barangays and/or most-affected households/families/groups.

31. After the MResT has agreed on the objective and key indicators, the various interventions or activities will be identified for each identified risk, with corresponding target barangay/groups, expected output, timeline for implementation and resource requirements. (Please refer to Annex 3 for the MRP template.). The MRP should include interventions or activities that will be supported or funded by other sources besides the community grant of PCRP.

What are P/P/As and SPs

Official Use Only

P/P/A stands for **Programs, Projects, and Activities** which are usually included in PH plans, particularly at the LGU level. The P/P/As are concrete actions or interventions that are identified and implemented by the government to achieve development goals with a budget from Local Development Investment Program (LDIP). P/P/As are listed in the Annual Investment Plan (AIP) of LGUs which serves as the basis for allocation of annual budget from local National Tax Allotment as well as from other sources. The CRIP of PCRP involves the preparation of a Municipal Resilience Plan (MRP) that includes a statement of resilience development objective as well as P/P/As. Interventions under the PCRP (as a Project)

SP stands for sub-project which refers to interventions or actions in the MRP that will be supported under the PCRP. The SP then is a sub-set of the P/P/As and is used to distinguish the sub-national interventions under the PCRP (as a Project).

32. The Municipal Resilience Team (MResT) shall be guided by the established priority criteria and the prescribed steps and processes for prioritizing and ranking the risks and vulnerabilities and its corresponding PPAs for PCRP funding, as outlined and discussed in the Field Guide.

33. The PCRP grant could be used to support the whole intervention (which could be a program or project by itself) or only specific activity/ies of a bigger initiative or to complement a related initiative. For PCRP-supported sub-projects, it is important to reiterate the different categories of sub-projects as well as the negative list or ineligible activities (Please refer to the Project Operations Manual). The MResT shall be guided by the prescribed criteria for priority-setting of PCRP-supported SPs. (Please refer to the Field Guide on the detailed steps and processes as attachment 6.7). The MResT is reminded that the following livelihood-related SPs are not eligible under PCRP:

- Working capital for the livelihood and economic activities;
- Funds or financial mechanisms for on-lending/re-lending; and
- Purchase of land, building, office space, or administrative area for the

Official Use Only

enterprise;
- Vehicles and transport.

34. For each sub-project that is proposed for PCRP support, a simple concept note has to be attached to the MRP. The concept note provides a preliminary or broad description of the interventions for PCRP support. These can be amended or updated in the course of preparing the detailed proposal under stage 2 of the CRIP. Please refer to Annex 3.1 for the format or template of the concept note.

35. It should be emphasized that the interventions could include both existing and new innovations. The interventions should also be comprehensive to include not only direct services or facilities but should also provide critical capacity building, including organizational development and practical skills training for resilience and/or local adaptation as well as popularized and instructive information and other support materials.

36. The MRP may require a series of meetings of the MResT and consultation with other LGU staff or even barangay officials/CVs to determine details on targeting, location, costing, resource requirement and other specific elements of the Plan. The MResT could also divide themselves into committees/groups to prepare a specific section and/or concept notes.

37. Upon completion, the MRP is officially submitted and endorsed to the RPMO for appraisal and approval. Parallel to the appraisal process, the results of the MRP are shared and presented with the Barangay Development Council (BDC) and community members involved in the PRVA, the BDC then develops a Community Action Plan for resources accessing of the unprioritized PPAs and risks based on the BPRVA results.

38. Once the MRP is endorsed, the RPMO shall convene the RTWG to appraise the MRP and facilitate its review and appraisal. If the MRP is found compliant with the appraisal guidelines, the RPMO shall issue the necessary clearance, which shall serve as the basis for proceeding with the second Barangay Assembly for

Official Use Only

the selection of the CSPMC. Please refer to Annex 5 for the guidelines on the appraisal of the MRP.

PART 4: COMMUNITY RESILIENCE SUB-PROJECT DEVELOPMENT

39. Once the MRP is approved by the RPMO, the interventions are converted into sub-project proposals with concept notes, detailed steps, design, work program, costing, and corresponding E&S instruments as detailed in Sub-Manual 2. The relevant PCRP key performance indicators under this stage are as follows:

- Community resilience plans developed in 85 percent of communities; and
- 85 percent of investments are in accordance with relevant national guidelines for resilience.

40. Since the MRP is a multi-year plan, it is expected that several sub-project proposals of different types/categories will be developed. The preparation of the sub-project proposals will be done through hands-on training as facilitated by the ACT with support from the relevant technical facilitators/specialists and/or resource persons.

41. In preparation for the development of the detailed sub-project proposal, the CFs will facilitate the organization of the Community Sub-Project Management Committee (CSPMC) which will oversee the preparation of the proposal and, subsequently, the implementation of sub-projects; manage financial disbursement; prepare and submit periodic reports as may be required by PCRP.

42. The CSPMC will be supported by the following sub-committees composed of CVs who will also be selected during the second Barangay Assembly. (Please refer to Annex 4 for specific roles of each sub-committee) All the heads of the various sub-committees will also be members of the CSPMC:

Official Use Only

a) Proposal Preparation Sub-Committee (PPSC) – leads the preparation of detailed proposal in accordance with the requirements consistent with the relevant provisions of Sub-Manual 2 (Community-Managed Sub-Project);
b) Procurement Sub-Committee (PSC) – manages community procurement, including preparation of Community Procurement Plan (CPP) and provides secretariat support to BASC;
c) Bids and Awards Sub-Committee (BASC) – manages the procurement process from posting of notices for bidding, acceptance and evaluation of bids, and post qualification proceedings and make recommendations to the CSPMC on award of contract;
d) Monitoring and Inspection Sub-Committee (MISC) – monitors SP physical accomplishment and ensures compliance with standards and protocols;
e) Sub-Project Implementation Sub-Committee (SPISC) – manages and supervises day-to-day activities for SP implementation, including mobilization of community labor;
f) Audit and Inventory Sub-Committee (AISC) - monitors financial management for sub-project and ensures compliance to the PCRP financial management guidelines/protocols;
g) Community Monitoring Sub-Committee - leads the monitoring of the approved plans to ensure compliance and track barangay-level progress against agreed Key Performance Indicators (KPIs) and serve as the program's advocacy arm by strengthening the community resilience network, promoting awareness, encouraging active community engagement, and mobilizing support for the program's goals and initiatives.
h) Operations and Maintenance Sub-Committee (O&MSC) – an ad hoc body responsible for developing the Operations and Maintenance Plan as part of the proposal and facilitate the organization of the Operations and Maintenance Group;
i) Stakeholder and Feedback Mechanism Sub-Committee (SFMSC) – receives and facilitates resolution of all feedback and grievances related to PCRP/sub-projects; and
j) Community Bookkeeper - responsible for the custody and maintenance of the books of accounts. In the absence of the

Official Use Only

Bookkeeper, the Assistant Bookkeeper shall take over tasks and responsibilities to ensure transparent and accountable management of community funds by accurately recording all financial transactions, maintaining books and supporting documents, preparing regular financial reports, and safeguarding records.

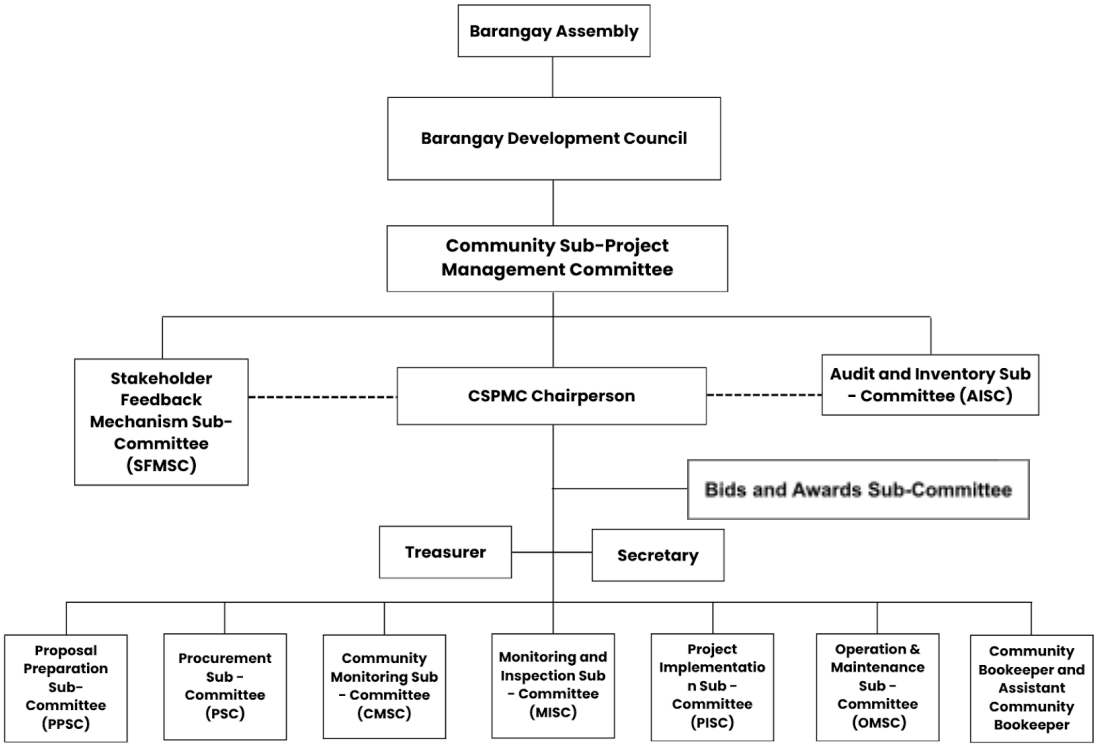

43. The CSPMC and each sub-committee will be composed of at least three CVs, duly selected during the second Barangay Assembly. Specifically, the BASC shall be composed of the Chairperson of the Project Preparation and Selection Committee (PPSC), the Chairperson of the Barangay Bids and Awards Committee (BAC) of the Barangay Local Government Unit (BLGU) as mandatory member, and one (1) community representative to be elected by the Barangay Assembly. For inter-barangay sub-projects or sub-projects covering multiple barangays, a lead barangay will be mutually agreed among the participating barangays based on the following criteria:

a) Barangay with the largest share (both in terms of physical and financial aspect) of the sub-project;
b) With demonstrated or proven good track record in managing sub-projects or community activities; and
c) Willingness to take lead accountability in overseeing physical and financial implementation.

44. The CSPMC will be under the auspices of the Barangay Development Council (BDC) and will furnish the BDC with all progress reports. Figure 2 provides a provisional organizational structure of the community structures.

Official Use Only

Figure 2: Organizational Arrangement for Sub-Project Implementation

45. For inter-barangay or clustered sub-projects, all concerned barangays shall select at least one representative to serve as members of the CSPMC sub-committees, while the CSPMC Chairperson shall be selected from the barangay where the proposed sub-project will be located or implemented, also ensuring that 30 percent of the members are women. While a lead barangay has primary accountability for managing the sub-project implementation, it is emphasized that all involved barangays should have a share in the tasks/ activities or the chair of the different sub-committees can be distributed among the barangays.

Official Use Only

46. For barangays which will implement sub-projects starting in the first year, all of the aforementioned committees/sub-committees will be organized upon approval of the MRP. For barangays which will start sub-project implementation in the second or third year, only the CSPM Chairperson, PPSC and O&MSC need to be organized during the initial year while the other sub-committees could be organized at least three months before the start of sub-project implementation.

47. All members of the CSPMC and the various sub-committees will undergo an initial workshop to orient them on their respective roles and responsibilities as well as the major preparatory activities prior to the development of the full proposals, including field or site validation and consultation; inventory of resources; clarifying required clearances/permits; engagement of technical service providers (if deemed necessary) and preliminary environmental and social risk assessment.

48. Upon completion of the preparatory activities, the members of the CSPMC, PPSC and O&MSC will participate in the Sub-Project Development Workshop (SPDW). The SPDW will be a hands-on training on the preparation of the detailed proposals. Sub-Manual 2 on Community-Managed Sub-Project provides the detailed steps, requirements, proposal templates by type of sub-project and other technical considerations. It is anticipated that follow-up activities will be conducted to complete and finalize the proposals depending on the type and complexity of the sub-projects.

49. Since the MRP covers a 3-year implementation period, it is anticipated that several sub-projects will be proposed where the implementation of which could be spread across different years. Nevertheless, the preparation of all proposals will start during the initial year. Should a sub-project require complex design and/or other preparatory activities (e.g., acquiring mandated clearances; formalizing deeds of donation; prepared detailed technical design; site inspection and validation) an interim proposal will be developed to ensure that all preparatory requirements are complied with and to allow sufficient time for finalizing the appropriate technical design.

Official Use Only

50. All sub-project proposals have to undergo Municipal Technical Desk Review (MTDR) by selected members of the MResT whose mandate and expertise are related to the proposed sub-project. Once found acceptable, the MResT endorses the proposal for funding to the RPMO for appraisal and approval.

51. The following sub-project proposals would be further endorsed to the NPMO for appraisal and final approval:

a) All proposals for water system level II, livelihood/economic support, and environmental conservation/protection SPs that entail nature-based solutions;
b) SPs with estimated cost of PHP 15M or more that will be charged against the PCRP community grant; and
c) SPs with substantial environmental and social risk assessment.

52. All first SP of each type will be forwarded to the World Bank for review and issuance of a No Objection Letter (NOL).

PART 5: COMMUNITY-MANAGED SUB-PROJECT IMPLEMENTATION

53. This stage focuses on putting into action the approved MRP and sub-project proposals. The key performance indicators under this stage are as follows:

a) 85 percent of sub-projects completed in accordance with approved technical plans and budget;
b) 85 percent of sub-projects with O&M plans with allocated annual budget;

54. Upon approval of the sub-project proposals, the CSPMC and various sub-committees undergo hands-on training on their respective roles and

Official Use Only

responsibilities in the course of implementing their sub-projects. The training will focus, among others, on organizational management, community-managed financial management, community-managed procurement, community-based monitoring and reporting. The detailed steps are provided for in SM2.

55. The detailed processes, templates, requirements, and other guidelines on Community Financial Management are presented in Sub-Manual 4 and on Community-Managed Procurement in Sub-Manual 6. To supplement the basics, the core guidelines for Community Financial Management and Community-Managed Procurement will be popularized and distributed to the members of concerned sub-committees. In addition, coaching and spot checks will be conducted by the ACT and other regional specialists.

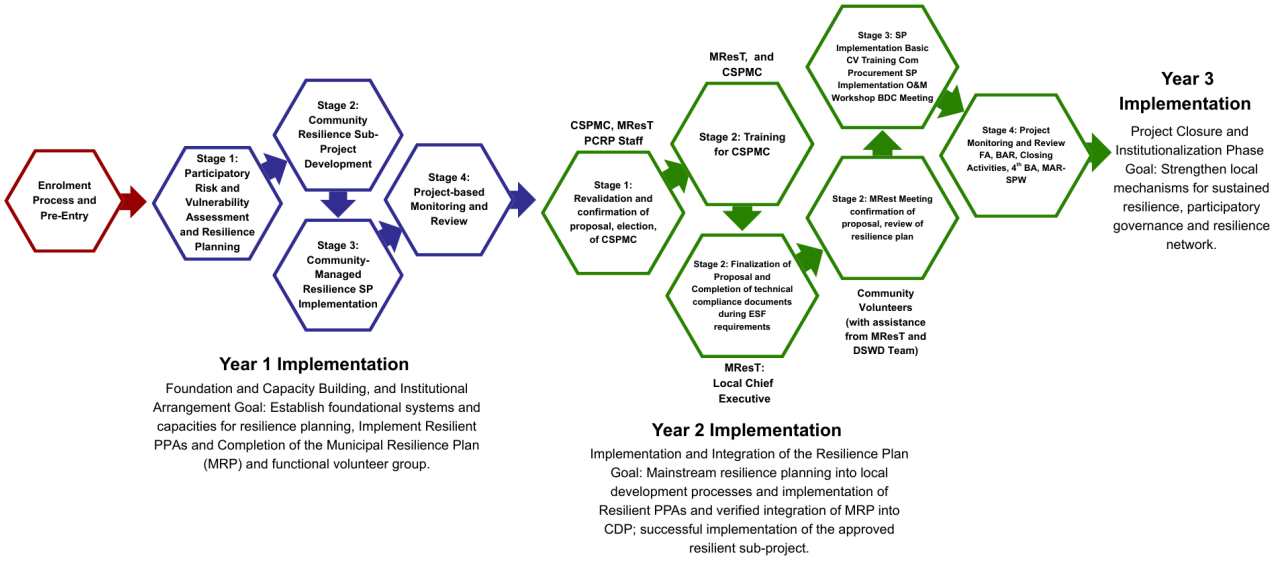

PART 6: COMMUNITY-BASED MONITORING AND REVIEW

56. The MResT will have the oversight responsibility for monitoring and reporting on the progress of the sub-project implementation. The MResT will convene, at least, on a semestral basis to discuss the progress of implementation against the MRP and approved sub-project proposals as well as recommend or agree on actions to address emerging operational constraints.

57. The MResT will also convene for an annual review of the MRP and sub-project implementation, focusing on the physical and financial progress, achievement of key performance indicators that include 85 percent of sub-projects with sustainability rating that is satisfactory or higher. The annual review will serve as a basis for possible updating or adjustments of the MRP and sub-project plan. Figure 3 illustrates the year-to-year transition primarily based on results of annual reviews.

Official Use Only

Figure 3: Transition Arrangements

58. At the barangay level, the various community-level committees and sub-committees have inherent responsibility to monitor certain aspects of sub-project implementation. The CSPMC will be responsible for overall monitoring and reporting on the physical and financial progress of the sub-project implementation. The various sub-committees will also provide inputs to the CSPMC on the findings or results of their various activities. The CSPMC will provide progress reports to the Barangay Development Council and report to the Assembly, at least, on a semestral basis.

59. The detailed guidelines, including required templates or reporting forms, are provided in Sub-Manual 7 on Monitoring and Evaluation, which will be included in the capability building for the committees/sub-committees. The ACT will provide secretariat support to all MResT meetings and ensure that the

Official Use Only

CSPMC and various sub-committees undertake their respective monitoring roles in accordance with the guidelines and within a set schedule.

PART 7: SUSTAINABILITY STRATEGY

The PCRP is designed in line with the retained function of DSWD on program development (model-building) to address emerging issues/problems on social protection. The project will be implemented in close partnership with the MLGU to ensure that the strategic lessons and the social technologies (i.e., PRVA as well as resilience planning) will be gradually adapted as part of their local development planning and budgeting.

60. At the community-level, PCRP will support the enhancement of the capacities of barangay officials for participatory risk and vulnerability mapping with broader mobilization of CVs that promote transparency and accountability, as well as enhance their engagement with the MLGU. The BLGU, with support from the MLGU, will be primarily responsible for sustained operations and maintenance of the PCRP-supported sub-projects. This will be formalized through a partnership agreement between the LGU and the DSWD upon turn-over of the sub-projects. It is also envisioned that the BLGU will continue to practice the key elements of PRVA or risk-informed planning and budgeting.

61. At the National level, the DSWD will ensure systematic documentation of strategic lessons for policy advocacy, particularly in relation to the broader adoption of locally-led and risk-informed resilience planning as a contribution to the operationalization of the Adaptive and Shock-Responsive Social Protection (ASRSP). The strategic lessons from PCRP are also expected to strengthen the preparation of the local social protection report in accordance with the DILG Memorandum Circular 2024-064. Lastly, the DSWD will continue to advocate for the passage of a law which will institutionalize the use of Community-Driven Development (CDD) approach as a major strategy for local poverty reduction and/or risk-based local resilience planning and budgeting.

ANNEX 4. ROLES OF COMMUNITY SUB-PROJECT MANAGEMENT COMMITTEE

Committee	ROLES AND FUNCTIONS
Proposal Preparation Sub-Committee (PPSC)	• Conduct preparatory activities, such as preliminary site validation, inventory of existing community infrastructure, market survey, inventory of available resources, etc. • Participate in sub-project development workshop and prepare the proposal. • Coordinate with/consult other municipal and barangay officials/ members for purposes of preparing the proposals.
Procurement Sub-Committee (PSC)	• Responsible for all procurement activities for the sub-project. • Act as BASC Secretariat and provides administrative support to the BASC (organize and attend meetings, assist in the drafting of resolutions, record of meetings, etc.). • Prepare all pertinent procurement documents based on the forms provided by the CBPSM. • Assist in the presentation of CPP during Barangay Assemblies. • Prepare and finalize the Community Procurement Plan (CPP) with the assistance of the BASC and update its status, as needed. • Post the ITB/Request for Quotation in conspicuous places and/or online. • Act as canvassers by serving Requests for Quotation forms/ITB to suppliers/ contractors/service providers. • Receive and record all bids/quotations in the Procurement Logbook in support of the BASC. • Prepare and deliver PO and contract documents.
Bids and Awards Sub-Committee (BASC)	• Advertise and/or post the Invitation to Bid (ITB) and receive bids in support in cases of absence or unavailability of the Procurement Team members. • Conduct procurement preparation meetings and pre-bid conferences.

Official Use Only

	• Determine the eligibility of prospective bidders. • Conduct the evaluation of bids with assistance of the TWG. • Undertake the post-qualification proceedings. • Recommend the award of contract to the CSPMC. • Perform such other related functions as may be necessary, including the creation of TWG from a pool of technical, financial and/or legal experts to assist in the procurement process. (See Community-Based Procurement Manual, for details.).
Monitoring and Inspection Sub-Committee (MISC)	• Monitor overall progress of the sub-project. • Validate physical accomplishments based on reports prepared by the PIC and the approved Work and Financial Plan. • Make recommendations to the CSPMC based on progress or delays. • Ensure the proper delivery of supplies, materials, and service. • Spot check actual deliveries. • Monitor utilization of materials and equipment and ensures all are properly accounted for:
Sub-Project Implementation Sub-Committee (SPISC)	• In charge of the day-to-day activities in the implementation of the sub-project, with the assistance of the ACT • Manages and supervises SPI, ensuring compliance to project standards. • Ensures proper recording of day-to-day activities, using forms/templates provided by the Project. • Prepares physical accomplishment reports. • Prepares the Daily Construction Logbook • Reviews and signs Time Sheets/Daily Time Record and Community Employment Records Sheet for community labor • Supervises the implementation of the sub-project to ensure that it is done in accordance with the provisions of the contract documents.

Official Use Only

Audit and Inventory Sub-Committee (AISC)	• Monitor the completeness and integrity of financial transactions. • Check the compliance of the CSPMC with the provisions of the financial guidelines. • Provide a feedback report to the BDC on the matter of financial management related to the sub-project implementation.
Community Monitoring Sub-Committee (CMSC)	• Monitor the implementation of approved community projects and activities to ensure compliance with plans, timelines, and agreed standards; • Prepare and submit monitoring reports and recommendations to the community assembly, barangay officials, CSPMC Chairperson and concerned program offices; • Support the promotion of community ownership and sustainability of implemented projects through continuous monitoring and feedback mechanisms. • Serve as advocates in promoting resilience concepts and strengthening resilience networks at the local level.
Operations and Maintenance Sub-Committee (OMSC)	• Assess the eligible Association/organizations within the community. • Prepare the O&M plan reflecting the details of organizing the OMG. • Provide inputs in the detailed proposals during the project proposal development. • Identifies the operation and maintenance requirements of the proposed sub-project at the project prioritization stage. • Determine the community's/BLGU's capacity to manage the project after completion to ensure sustainability. • Determine support needed by the community/BLGU in terms of sub-project operations, maintenance, and sustainability.
Stakeholder and Feedback Mechanism	• Receiving, documenting, and categorizing grievances related to the program's implementation.

Official Use Only

Sub-Committee (SFMSC)	• Ensuring timely and impartial investigation and resolution of complaints. • Raising awareness about the grievance redress system within the community. • Maintaining confidentiality and fairness in handling sensitive issues. • Reporting and tracking grievance cases to ensure they are resolved properly. • Coordinating with relevant stakeholders to facilitate appropriate responses and actions.
Community Bookkeeper and assistant Community Bookkeeper	• Record all financial transactions accurately and in a timely manner, based on approved and verified supporting documents. • Ensure completeness and proper filing of financial documents, including vouchers, official receipts, disbursement records, and bank documents. • Prepare periodic financial reports (e.g., cash flow reports, statement of receipts and expenditures, fund utilization reports) for presentation to the community, ACT, and LGU. • Monitor fund balances and ensure that expenditures are within the approved budget and work plan. • Assist in bank transactions, including preparation of deposit slips and coordination for withdrawals, subject to established controls. • Safeguard financial records and ensure they are readily available for monitoring, validation, and audit. • Support financial transparency by presenting financial updates during community assemblies or meetings. • Take over the duties and responsibilities of the Community Bookkeeper in their absence to ensure continuity of financial management functions. • Participate in financial reporting, reconciliation, and compliance activities as required.

ANNEX 5. GUIDELINES ON RPMO APPRAISAL

GUIDELINES ON MUNICIPAL RESILIENCE PLAN AND CONCEPT NOTE REVIEW

Mechanics and Preparations:

- The technical review of the Municipal Resilience Plan (MRP) and Concept Notes (CN) will involve a joint meeting of a team composed of the following:
    - Key PCRP regional staff - DRPM and CDO IV; and
    - Selected members of Regional Inter-Agency Committee, depending on the nature or category of proposed sub-projects.
- All members of the review team must familiarize themselves with the MRP and CN template, including any supplemental guidelines for preparing or accomplishing them.
- It would be good if the review team can be given copies of the MRPs and CNs at least two days before the review meeting. If this is not possible, the review team should be given about 10 minutes after every presentation to read through the documents and prepare comments.
- To ensure consistency of representation and perspective, it is best if the MRPs and CNs are reviewed in batches, ideally per province to allow broader context.

Objectives of the Review

- The review serves both as a technical assistance mechanism and a learning opportunity.
- As technical assistance, the review team will not only provide comments on the quality of the documents but would also provide options for enhancements – prescriptive recommendations will be avoided, to the extent possible, to ensure that decisions are made by the MResT unless the recommended enhancements are non-negotiable parameters of PCRP (e.g. negative list and/or eligible SPs).
- It is also a learning event since the team could also draw lessons from the

Official Use Only

first batch of MRPs and CNs as inputs to succeeding stages of implementation, particularly development of full proposals.

Considerations for Review:

The following are proposed as basic areas or considerations for review – other concerns may be added as relevant to the local context or as follow-up

<u>On MRPs</u>

a) Completeness:

i. Are the sections fully and appropriately filled-up?

ii. Are the relevant data/information complete and clearly qualified or explained in footnotes or side notes?

b) Congruence of MRP objective and indicators:

i. Is the statement of objective aligned with or responsive to the prioritized risks?

ii. Is the objective clearly stated and could be understood by all major stakeholders?

iii. Are the potential benefits consistent with the overall PCRP PDO?

iv. Are the indicators SMART?

v. Will the set of indicators be sufficient to measure the achievement of the objective?

c) Internal coherence of P/P/As:

i. Are the activities logically sequenced (where outputs of previous activity are inputs to the next activity)?

ii. Are the activities or set of activities relevant in addressing all the key identified causes and/or effects?

iii. Are the activities sufficient to achieve the expected output?

iv. Does the P/P/As include all required "soft" activities such as capacity building, organizing required teams, procurement, financial management requisites?

v. Are the expected output clear and SMART? Are the target or unit of the output aligned with the PRVA results?

vi. Are the timelines realistic and considers availability or manageability of community stakeholders as well as technical advisers/support?

Official Use Only

vii. Does the plan provide for regular report and meetings of MResT and other key groups, if any?

d) Overall sufficiency of MRP

Does the MRP provide a coherent flow from using PRVA results and priority risks as rationale or backdrop for the objectives that could be measured by the indicators; that the activities are sufficient and realistic in terms of inputs and outputs to achieve the resilience objective?

e) Ownership of MRP

Were the MRP and CN prepared in accordance with the CRIP and guiding principles of PCRP?

On Concept Notes:

a. **Completeness –** Are all the data/information complete and properly qualified or explained in footnotes?
b. **Rationale –** Is the proposed sub-project justified on basis of data/information from the validated PRVA and MRP objectives/indicators
c. **Technical validity or Accuracy –** Are the technical data correctly reflected or stated using the right unit or quantity or other specifications as required by the template. Also, check totals if correct.
d. **Internal coherence/integrity–** Are the proposed components and/or activities complete and logically sequenced to achieve desired output. Are desired outputs clear, specific, measurable and manageable. Is the proposed duration or schedule of the subproject adequate to deliver the proposed activities, procure and deliver the equipment and facilities that are deemed appropriate to achieve the objectives of the subproject?
e. **External coherence/consistency** – Is proposed sub-project eligible and not included in negative list and livelihood non-eligible items?

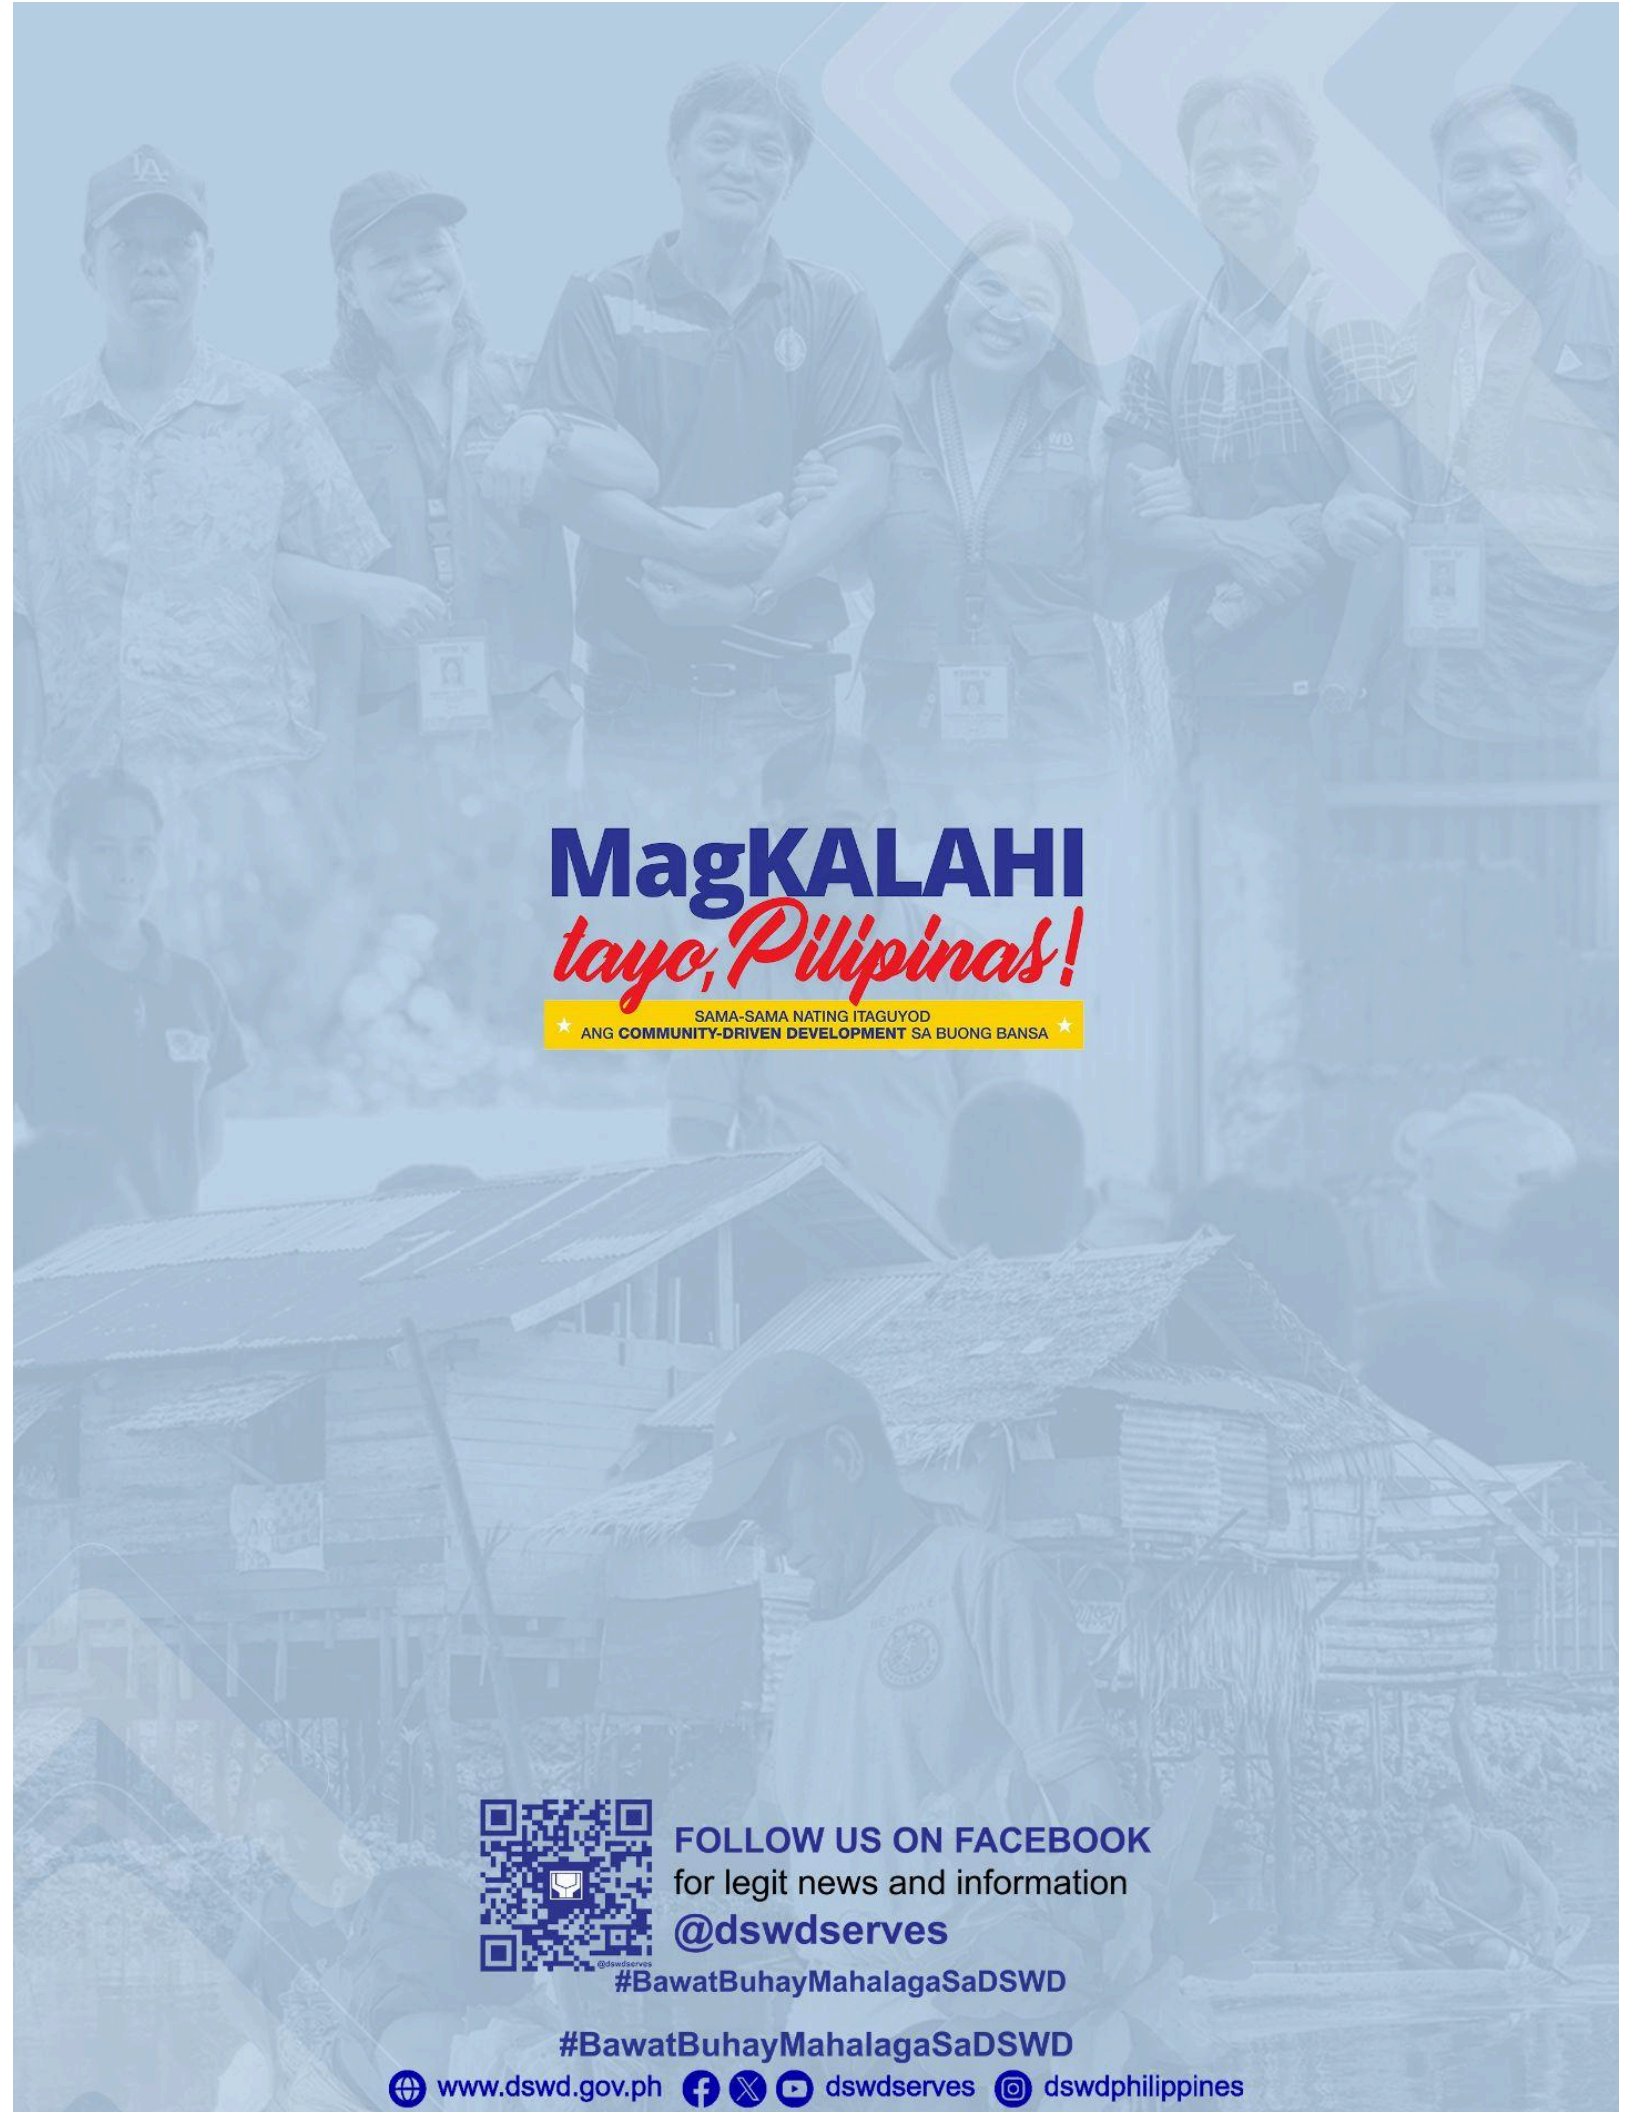

Official Use Only

f. **Adequate costing** – Are the cost elements appropriate and complete? Are the cost estimates realistic?
g. **Indicative capacity building needs**: Do the CNs clearly indicate the needs for capacity building/technical assistance?
h. **Ownership of CNs** – Is the institutional arrangements clear about community participation?

Action from Review Team

a. **Full clearance and endorsement for approval by RPMO,** with recommendations related to preparation of full proposal
b. **Conditional clearance with recommendations for enhancements within a set target schedule** (depending on extent of enhancements and other local considerations). Revised MRP would be subject to desk review by RPMO, ensuring integration of all comments/recommendations of Review Team
